What is RMarkdown?

Markdown = Language for text fomrmatting - Markdown
- an easy to write plain text format for creatin dynamic documents and reports
- contains "normal" text and code chunks (e.g. R, but Python, SQL, and more also possible)
- RMD -> MD -> html, Docx or PDF
- Formatting documents outside the analysis

Creating a document that can contain both text and code:
- When creating ("knitting"), the code is executed and displayed together with the description.
- Only a document with out warnings/errors can be knitted.
- Possible to export a Word, HTML or PDF file.
